

## Sync. Rectifier Step Up Converter

### Features

- Up to 90% Efficiency at  $I_{OUT}=2A$   $V_{OUT}=5V$  from 3.3V Input
- Low 70 $\mu A$  Quiescent Current
- Guaranteed 3A Output Current at  $V_{OUT}=5V$  from 3.3V Input
- 500KHz PWM Switching Frequency
- Synchronous and Embedded Power Mosfets; No Schottky Diode Required
- Internal Soft-Start to Limit Inrush Current
- Adjustable Output
- Output turn off true shutdown function
- Current Mode Operation with Internal Compensation for Excellent Line and Load Transient Response
- Overload/Short-Circuit Protection with hiccup control
- Shutdown Current <1 $\mu A$
- Thermal Shutdown
- Compact 8 pin, SOP8 (FD) package

### General Description

The G5177C is a compact, high-efficiency, synchronous step-up converter with power Mosfets embedded and with output turn off true shutdown function and adjustable output current limiting with foldback for a single-cell Li-ion/polymer battery. The G5177C uses only 70 $\mu A$  (typ) quiescent current and allows the converter to switch only when needed at no load and light loads, and when load is higher than 100mA, it uses fixed-frequency PWM technique at 500KHz. It features a current mode control for fast transient response with internal compensation. The G5177C includes cycle-by-cycle current limit to maximum inductor current and over-temperature protection circuit. The G5177C is suitable for iPad-like computers, smart phones and portable handheld devices.

The G5177C is available in a SOP8 (FD) package. The operating temperature range is from -20°C to +85°C.

### Application

- iPad-like computers, smart phones and portable handheld devices.

### Ordering Information

ORDER NUMBER	MARKING	TEMP. RANGE	PACKAGE (Green)
G5177CF11U	G5177C	-20°C to +85°C	SOP-8 (FD)

Note: F1:SOP-8 (FD)

1: Bonding Code

U: Tape & Reel

### Pin Configuration

Note: Recommend connecting the Thermal Pad to the Ground for excellent power dissipation.

### Typical Application Circuit

$V_{OUT}=V_{REF} \cdot (1+R1/R2)$ , where  $V_{REF}$  typical is 1.23V.

## Absolute Maximum Ratings

V<sub>OUT</sub> to GND ..... -0.3V to 6V  
 LX to GND ..... -0.3V to 6V  
 ILIM0 to GND ..... -0.3V to 6V  
 ILIM1 to GND ..... -0.3V to 6V  
 FB to GND ..... -0.3V to 6V  
 BAT to GND ..... -0.3V to 6V

Thermal Resistance of Junction to Ambient ( $\theta_{JA}$ )  
 SOP-8 (FD) ..... 132°C/W  
 Continuous Power Dissipation ( $T_A = +25^\circ\text{C}$ )  
 SOP-8 (FD) ..... 0.9W  
 Storage Temperature ..... -55~150°C  
 Operation Temperature ..... -20~85°C

## Electrical Characteristics

(V<sub>OUT</sub> = 5V, V<sub>BAT</sub> = 3.6V, L = 2.2μH, C<sub>IN</sub> = 47μF, C<sub>OUT</sub> = 68μF, T<sub>A</sub> = 25°C)

The device is not guaranteed to function outside its operating conditions. Parameters with MIN and/or MAX limits are 100% tested at +25°C, unless otherwise specified.

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS

## Pin Description For SOP-8 (FD)

PIN	NAME	FUNCTION
1,2	LX	Inductor Node.
3	VBAT	IC Power Supply Input.
4	ILIM01	Output Current Limit Setting, and On/Off Control.
5	GND	IC Analog Ground.
6	FB	Converter Feedback Input.
7,8	VOUT	Converter Output.
	EP	Exposed Paddle. Connect to the ground plane to optimize thermal performance. EP is internally connected to GND. EP must be connected to GND at a single point with a star ground connection.

## Block Diagram (For SOP-8 (FD))

## Function Description

The G5177C current-mode step-up DC-DC switching converter uses a fixed-frequency PWM architecture with output shutdown. In light-load mode, the converter switches when needed, consuming only 70μA of quiescent current. In heavy-load mode of higher than 100mA, the converter switches every cycle at a constant frequency as fixed-PWM, thus enabling noise filtering. The G5177C is highly efficient, with internal and synchronous switches. Shutdown reduces the quiescent current to less than 0.1μA. Low quiescent current and high efficiency make this device ideal for portable equipment.

The G5177C step-up DC-DC switching converter typically generates a 5V output voltage from a single-cell battery input voltage. The minimum output peak current limit is 6.5A in SOP8-FD package. When an

over-current, short-circuit or thermal shutdown condition is encountered. The converter will turn off until the over-current or over-temperature condition is removed, and during the state of short-circuit after precharge is end, the converter will turn off 64ms first and then turn on 1ms cycle by cycle to protect converter under short circuit operation. Internal soft-start limits the inrush current to less than 500mA under no-load conditions during startup. The G5177C is adjustable by 2 external resistors with calculating the value for R1 as  $R1 = R2 (VOUT/VFB - 1)$ .

The G5177C switches at a 500KHz frequency, allowing for tiny external components. The G5177C is optimized for use in iPad-like computers, smart phones, portable handheld devices and other applications requiring low quiescent current for maximum battery life.
