2.0 Functional Block Diagram

3.0 Introduction

PL2303SA is a convenient small-factor solution for connecting an RS232-like full-duplex asynchronous serial device (TX-RX only) to any Universal Serial Bus (USB) capable host. Prolific provides highly compatible drivers that could simulate the traditional COM port on most operating systems allowing the existing applications based on COM port (using TX-RX only) to easily migrate and be made USB ready.

By taking advantage of USB bulk transfer mode and large data buffers, PL2303SA is capable of achieving higher throughput compared to traditional UART (Universal Asynchronous Receiver Transmitter) ports. The flexible baud rate generator of PL2303SA also could be programmed to generate any rate between 75 bps to 115 kbps by driver customization.

PL2303SA is exclusively designed for mobile and embedded solutions in mind, providing a very small footprint that could easily fit in to any connectors and handheld devices. With very small power consumption in either operating or suspend mode, PL2303SA is perfect for bus powered operation with plenty of power left for the attached devices. Flexible signal level requirement on the RS232-like serial port side also allows PL2303SA to connect directly to any 3.3V~1.8V range devices.

Notes:

(1) – Tri-State, Output Pad. Level and Driving Capability decided by VDD_325.

(2) – Tri-State, CMOS Input/Output Pad with level shifter. Level and Driving Capability decided by VDD_325.

6.0 Data Formats & Programmable Baud Rate Generator

The PL2303SA controller supports versatile data formats and has a programmable baud rate generator. The supported data formats are shown on Table 6-1. The programmable baud rate generator supports baud rates from 75 bps up to 115 kbps as shown in Table 6-2.

Table 6-1 Supported Data Formats

	Description
Stop bits	1 1.5 2
Parity type	None Odd Even Mark Space
Data bits	5, 6, 7, 8

Table 6-2 Driver Supported Baud Rates

Baud Rates (bps)	Baud Rates (bps)	Baud Rates (bps)	Baud Rates (bps)
75	1200	7200	38400
110	1800	9600	56000
150	2400	14400	57600
300	3600	19200	115200
600	4800	28800	

NOTE: Additional baud rate support within the chip specification range can be added by driver customization request. Contact Prolific for more information.

7.0 Application Reference Circuit Diagram

Following is an example of using the PL2303SA as a simple USB to TXD/RXD serial converter. Note that Pin 3 (RS232 VDD) is the power pin for the serial port signals. If Pin 3 is 3.3V, the serial port is 3.3V. If Pin 3 is 2.5V, the serial port is 2.5V. The range can be from 1.8V~3.3V. Contact Prolific FAE for more PCB design support.
